

COM2002 INTERMEDIATE PROGRAMMING
2024 – 2025 SPRING

Laboratory Week: 12 – 16 May 2025

Topic : Low-Level Programming

Program : XOR Encryption (xor.c)

Definition : The program that encrypts a message by (exclusive-or) XORing each character with a secret key. The original message can be entered by the user or read from a file using input redirection; the encrypted message can be viewed on the screen or saved in a file using output redirection.
